Disclaimer by Volkswagen

1. The specified consumption and emission data were determined according to the legally required measuring methods under the worldwide harmonised light-duty vehicles test procedure (WLTP). The WLTP is a more realistic test procedure for measuring fuel consumption and CO₂ emissions. The values vary depending on the selected optional equipment. To allow energy consumption of different types of drive systems (petrol, diesel, gas, electricity, etc.) to be compared, they are also shown as so-called petrol equivalents (unit of measurement for energy). CO₂ is the main greenhouse gas responsible for global warming. CO₂ average of all vehicle models sold in Switzerland: 174 g/km (WLTP). Provisional CO₂ target value for vehicle models sold in Switzerland: 115 g/km (WLTP). The information for a specific vehicle may differ from the registration-relevant data according to Swiss type approval. The consumption data in our sales documents are European standard fuel consumption figures, which are used to compare the vehicles. In practice, these can sometimes vary considerably depending on driving style, weather and traffic conditions, storage capacity, topography and season. We also recommend the eco-drive driving style to conserve resources. Energy efficiency category according to the new calculation method according to Annex 4.1 of the Ordinance on the Energy Efficiency Requirements for series-produced Installations, Vehicles and Equipment (Energy Efficiency Ordinance, EnEO; Verordnung über die Anforderungen an die Energieeffizienz serienmässig hergestellter Anlagen, Fahrzeuge und Geräte, Energieeffizienzverordnung, EnEV), valid from 1 January 2020 to 31 December 2020. Information on the energy label for passenger cars can be found at the Swiss Federal Office of Energy (SFOE).
